DETAILED ACTION

Amendment filed on January 24, 2005 has been entered. Claims 3 –4 are pending. Any issue that is not addressed in this Office Action is considered obviated.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 3-4 rejected under 35 U.S.C. 103(a) as being unpatentable over Aizawa et al in view of Nariciso Jr, US Patent 5,298,018.

Applicant's arguments with respect to this rejection have been fully considered but are not persuasive.

Applicant argues that the instant claims provide intravascular irradiation of the light through an inflated balloon, so that the central axis of the laser irradiating fiber is held coincidental and in the same position as the central axis of the vascular lumen of the blood vessel. (see pages 4-5 of the arguments). Accordingly, Applicant appears to conclude that there is no teachings as to proper positioning of laser irradiation to the site of interest (see page 7 of the arguments).

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Here it the obviousness is based on the combined teachings of the references

and how it is interpreted by one of ordinary skill in the art. Accordingly, arguing the shortcomings of one does not overcome the obviousness analysis.

Applicant is reminded that Narciso teaches that photodynamic therapy during PCTA procedure to limit restenosis of a blood vessel intima subject to a smooth cell proliferation (see abstract). Narciso specifically explains that the use of a photodynamic agent can be during, before or after a PCTA procedure (see col 2, lines 6-65). Narciso also suggests Npe6 to be a suitable photosensitizer for such treatment (see col 7, table 1, under class Phorobides). Since Narciso teaches the use of photodynamic therapy during a PCTA procedure, all method steps of the instant claims are also inherently disclosed.

Furthermore, applicant has not provided any evidence of unexpected results as to the optimization of the laser irradiation through an inflated balloon during the procedure. Accordingly, absent a showing of such positioning of a laser device, it would have been obvious to one of ordinary skill in the art at the time of invention to optimize the location and mode of delivery of the laser irradiation by routine experimentation.

Conclusion

No claims are allowed.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

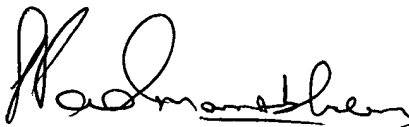

Art Unit: 1617

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
